

Highest standard of full service for cosmetics

As a family-run company with our headquarters in the heart of Europe, we have made a national and international name for ourselves as a contract manufacturer of cosmetic products with decades of experience. We create production concepts for new and existing brands in trade and industry.

Our consultation services for product and brand management include the development of design suggestions and brand presences. As creative force for cosmetic products, we forge a bridge from market research through to the delivery of the finished product. During our support of your project, we impress with our short decision-making channels and the provision of a direct point of contact. We combine concept design, development, procurement, production, filling, packaging and quality assurance under one roof.

We focus on completely reliable service and a high standard of quality and flexibility. These maxims are valued both by managers of small and medium-sized companies and purchasers for major commercial enterprises. Our top priorities are long-lasting partnerships and the best, service-focused implementation of your wishes.

We offer everything from one single source

You can hand over your projects to us and we will accept and carry them out as if they were our own, that's what full service means to us. We use our more than 50 years of experience and our competence, our ideas, our understanding of quality, our manpower and our technology. Reliable, flexible and responsible.

We are only satisfied when you are absolutely satisfied!

The five pillars of our full service programme are the concept design, the development, the manufacturing, the filling and the documentation of cosmetic products for facial skincare and body care in accordance with the international GMP Cosmetic Directive and our own high quality standards. The focus of our professional service is the manufacturing of fluid products and the filling of small and medium quantities. Product-dependent volumes from laboratory scale up to 800 kg give us the widest possible margin for your requirements.

Our range of services

We offer you complete solutions for innovative cosmetic products with innovative packaging solutions. Starting with the formula development, through to production, filling and packaging and ending with storage, delivery and marketing. In accordance with your individual wishes or from our wide pool of formulas with con-

tinual market observation and the relevant documentation. We strive to provide the best price-performance relationship for your brand with a high product quality.

Quality management and quality assurance

With the maximum level of flexibility, we fulfil your individual requirements and ensure superordinate quality management. Implementation and checks take place in accordance with the GMP Cosmetic Directive (DIN EN ISO 22716), by industry associations and customer audits.

The constant in-process and end checks of bulk and finished products guarantee quality assurance at a very high level during the entire development, production and delivery process.

In addition, analyses of the ingredients and finished goods in internal and external laboratories confirm the safety in terms of microbiology, dermatology and health.

When selecting our suppliers, we focus on both quality and reliability. We provide training to ensure careful handling of resources for generation of energy. In addition, we sensitise employees, suppliers and third party companies to ensure they act in an environmentally-aware manner. Quality assurance guarantees consistent batch tracking of all supplied products on the basis of its documentation.

Research and development

You decide whether you need an individual product, whole range or extraordinary creation. With attention to detail, we will develop the product you want with our tried-and-tested knowledge in accordance with the defined purpose.

We begin to carefully select the active agents and ingredients, which are combined in accordance with the latest research results. Our range extends from complete new developments based on an idea to the relaunch of a cosmetic product and required market adjustments of existing cosmetic formulations.

Our own pool of market-ready formulas means rapid product introduction is possible when needed.

Our range of products

- ✓ Cleaning products
- ✓ Facial skincare products
- ✓ Natural cosmetics
- ✓ Body care products
- ✓ Hand and foot care products
- ✓ Products containing alcohol, such as perfumes, aftershaves, etc.
- ✓ Shower and bath products

Production and manufacturing

State-of-the-art technology and innovative processes ensure production in various batch sizes at an optimal cost. Our strength is in small and medium batch runs. Conformity criteria, such as NATRUE, Ecocert, Öko-Test, neuform, Stiftung Warentest, etc., are incorporated early on.

The homogenisers / mixers can cope with batch sizes of up to 800 kg. The yardstick throughout the entire production process are the high standards of the cosmetic industry. In addition, all procedures of bulk production are subject to defined

processes which are continually checked by our quality assurance department.

We plan the manufacturing and filling resources taking into account the material availability – even of the components provided by our customers.

This is how we guarantee the highest possible efficiency.

Our product categories

- ✓ Emulsions (W/O, O/W, PIT)
- ✓ Creams, fluids, lotions
- ✓ Ampoule concentrates
- ✓ Concentrates, serums
- ✓ Masks
- ✓ Gels, oils
- ✓ Sprays
- ✓ Aftershaves, perfumes

Packaging and packing

From fully-automated to manual: As well as our extensive range of machinery, we also have a carefully selected pool of packaging employees for special packaging processes. This makes it possible to rapidly handle and realise individual packaging orders for small batches or complex packaging formats. You can choose from manual packaging, semi-automated or fully-automated packaging.

We bundle, cellophane-wrap and package in displays and folded boxes. In addition, we can label, encode and emboss for you.

If you provide the packaging material, we will support you with our supply management system. Our range of services also includes warehousing. At your request, we can take over the organisation of logistics: The products are dispatched by shipping company. ■

Filling

Thanks to our technical possibilities, teamed with flexible production units, we can quickly and efficiently adapt to the desired order volume with variable order sizes and potential changes to packaging formats. Our wide batch spectrum makes it possible to realise small batch volumes as well. The well-organised order throughput times make it possible for you to plan your deadlines reliably.

Before the production line is put into operation, approval is given by the quality assurance department, which also permanently checks the filling process. Every finished product is subject to a final inspection. All production lines are designed in a modular structure and can be quickly converted to meet new requirements.

Fully-automated filling lines are set up for bottles made of plastic and glass (50 ml to 500 ml), jars (15 ml to 250 ml), tubes (5 ml to 250 ml) and dispensers with various sealing options.

The integrated sealing and labelling station ensures efficiency – as well as direct

boxing including provision of product leaflets and corrugated inliners. Glass ampoules (1, 2 and 3 ml) can be filled at two ampoule filling stations.

We can also fill demanding consistencies into airless dispensers (5 ml to 75 ml), pump dispenser systems and tottles.
