

„Small things make perfection, but perfection is no small thing“

(Henry Royce)

We offer more than 2 000 m² worth of complete solutions for the manufacturing of cosmetics, medical, and cleaning products: from the development of formulas, packaging design, production, filling, packing to storage and delivery; we handle all processes at our company premises in Scharbeutz on the Baltic Sea coast.

We can manufacture liquid, paste-like, and powder products with our modern manufacturing and process equipment.

Diverse certifications and extensive verification processes in the in-house laboratory offer the necessary security for your project and also guarantee optimal product quality.

Headquarter

The idea behind it

Product quality and the client are central. This sums up our idea in just a few words.

This is informed by our ambition, attaining and guaranteeing the best possible product quality as well as offering our clients the best possible service. High flexibility and rapid solution concepts naturally also play an important role.

All processes within the company are grounded within a quality management

system framework, and processes are constantly tested and, if necessary, optimized. Our high-performance and committed team consists of qualified experts from, amongst others, the areas of development, quality assurance as well as production, filling and warehousing.

Our certifications – your safety

In order to satisfy the numerous legal requirements of the present day and ensure ongoing growth of the company, we have

had ourselves certified according to the following standards:

DIN EN ISO 9001
(Norm for quality management systems)

DIN EN ISO 13485
(Norm for comprehensive quality management system for the design and manufacture of medical devices.)

DIN EN ISO 22716:2008-12
(Cosmetics - Good Manufacturing Practices (GMP))

Bulk production

Product samples

As a result of the implementation and documentation of production processes in accordance with the standards of the "U.S. Food and Drug Administration" ("FDA" for short), we will soon be able to manufacture medical products for the US market.

Further certifications for DIN EN ISO 14001 (environmental management) as well as IFS HPC (International Featured Standards for Household and Personal Care Products) are currently being prepared.

Research & development

Custom solutions are developed in the on-site laboratory - we create formulas from your product ideas. Aside from your specifications and formula properties, we can also consider requests regarding conformity, with, for instance, an ÖkoTest. A perfectly equipped area with extremely modern measuring, testing, and manufacturing equipment ensures precise results and targeted development approaches.

In this, we place great value on the use of raw materials and testing procedures, but do not test on animals.

Below is a small excerpt from our product range:

- Shower and bathing products
- Creams, lotions and gels for body and face
- Hair care products
- Oral and dental care products
- Cleaning products
- Body, hair and massage oils
- Medical Products

Can't find what you're looking for? Please contact us - we can also develop the product you desire!

Production

Here you will find a completely tiled room, which is divided into the production, cleaning, and disinfection areas through a number of sluices. We manufacture liquid, paste-like and powder products here, physi-

Formula in pilot approach

cally separating them from one another. Process blending facilities with batch sizes ranging from 100 kg to 1 000 kg are provided, as needed, with electricity, compressed air, superheated steam, and cooling water by way of centralized systems, and can therefore handle even complex manufacturing processes.

A further hygiene sluice in front of the production area ensures flawless hygienic conditions that meet the standards for the production of pharmaceutical medicines and foodstuffs.

Filling & packaging

In connection with bulk production, we also have various options on offer on how to fill and package your product. Tube and bottle fillers as well as jar fillers and various semi-automatic and manual filling machines are available.

As in the bulk production area, a hygiene sluice and overpressure ensure ideal hygienic conditions and clean areas during filling.

Extensive cleaning of the filling equipment as well as the obligatory line clearance by QS employees are ensured as part of each order agreement. During filling, regular sampling and testing ensure constant and flawless filling quality.

After having filled the bulk and securely locked away the primary packaging material, it is transported into the separate packaging area via fully-automatic conveyors. Here, further machines for printing, labeling, coding, etc. are available.

Together with our well educated and trained employees and these technical conditions, we are able to operate flexibly to deal with smaller or larger batches as well as with more complex packaging types.

Additional services

Would you like to advertise your products with certain seals of approval? We also offer the organization and handling of external tests through independent institutes, such as Dermatest.

Furthermore, Kosmetik Konzept can facilitate and organize safety evaluations, preservative challenge testing etc. as well as contact with specialist lawyers regarding product offerings.

Conclusion

Kosmetik Konzept GmbH is a full service provider, offering complete solutions from a single source. Of course we also offer individual services separately, such as development or filling. We will happily provide you with an offer suited to your needs. Aside from providing you with a formula, we can also develop it for you, guided by your wishes and ideas. ■

Contact us and let us convince you of our capabilities, skills and our extensive range of services!
